OsmoVital

OsmoVital - Hardening & Mineral salt for soft and osmosis water

OsmoVital is a highly soluble hardening and mineral salt that adds all the essential minerals, without nitrates or phosphates, to create an optimal water environment. With OsmoVital, you can quickly and easily harden osmosis water, demineralized water, filtered rainwater, or tap water that is too soft.

Ideal for freshwater aquariums with fish and plants, it ensures optimal water conditions. OsmoVital is easy to use when filling your aquarium and subsequently with each water change.

OsmoVital increases KH (Carbonate Hardness) & GH (General Hardness) and adds essential vitamins and trace elements such as potassium, iron, manganese, boron, iodide, fluoride. Both KH and GH contribute to a stable pH level in an aquarium: while GH provides the necessary minerals, KH is more directly responsible for maintaining a stable pH, acting like a protective buffer.

(5gr) per 100 L	GH °d	KH °d	µS/cm
1	1.0	0.7	60
2	2.0	1.3	120
3	3.0	2.0	180
4	4.0	2.6	240
5	5.0	3.3	300
